

Raahi — Tech Stack

Frontend to backend overview for the team · June 2026

Mobile App (Frontend Repo)

Layer	Technology
App framework	Flutter (Dart 3+)
Android native	Kotlin + Java 17 (Gradle)
iOS native	Swift (Flutter iOS runner)
State management	Riverpod
Navigation	go_router
UI	Material Design + Google Fonts

Frontend Integrations

Service	Technology
REST APIs	Dio → api.raahionrescue.com
Live updates	Socket.io + SSE (ride offers, status)
Maps & location	Google Maps , Geolocator, Geocoding
Authentication	Firebase Auth (phone OTP), Google Sign-In, Truecaller
Push notifications	Firebase Cloud Messaging (FCM)
Payments	Razorpay + UPI
Local storage	SharedPreferences + Flutter Secure Storage

Documents / media	image_picker, file_picker
-------------------	---------------------------

Backend (Deployed — Separate Repo)

Layer	Technology
Language	Node.js + TypeScript
Architecture	Microservices behind API Gateway
Services	Auth · User · Driver · Ride · Pricing · Notification · Realtime · Admin
Realtime	Socket.io + SSE (EventBus, H3 geo matching)
Database	PostgreSQL
Infrastructure	Nginx reverse proxy · cloud deployment
Auth bridge	Firebase phone token → backend JWT

Microservices (Ports)

Service	Port
API Gateway	3000
Auth Service	5001
User Service	5002
Driver Service	5003
Ride Service	5004
Pricing Service	5005
Notification Service	5006
Realtime / WebSocket Service	5007

Admin Service	5008
---------------	------

End-to-End Flow

Flutter app → REST (Dio) + Realtime (Socket.io / SSE) → **Node.js / TypeScript microservices** → **PostgreSQL**, with **Firebase** for OTP & push, and **Google Maps / Razorpay** on the client.
